Travelport unveils latest innovations from Travelport Developer Network at Travel Technology Europe (TTE) exhibition

Langley, United Kingdom
Jan 30, 2013

Travelport, the business services provider to the global travel industry, is set to unveil the latest innovations from Travelport Developer Network at this year's Travel Technology Europe exhibition at Earls Court on 5th and 6th February.

Travelport Developer Network brings together experienced developers, creating technology solutions for 67,000 travel agency customers worldwide. Eight leading Travelport developers will debut the latest solutions from the Network at a series of specially designed pods adjacent to the Travelport stand.

Simon Ferguson, UK & Ireland Regional Director, commented: "We'll be using the TTE exhibition as a platform to announce what's up and coming on the travel technology landscape. Travelport Developer Network tripled in membership in 2012, delivering fresh applications and new mobile developments using our uAPI technology."

"At TTE, we'll be unveiling what the Network has achieved so far. I look forward to welcoming delegates to our stand and sharing the very latest developments in travel technology," Simon added.

Also at TTE, Simon Ferguson will take part in two main-stage conference sessions: 'Distribution 3.0', a debate on how airline distribution will evolve throughout the 2010s, and 'Travel Technology Roadmap', a session on the key areas where travel technology will impact in the year to come. Travelport will be the headline sponsor of TTE 2013 and is sponsoring the VIP Lounge.
